The objective of this study was to identify the personality traits and nursing care issues of clients living with HIV and AIDS. A qualitative, exploratory research design was used to collect data. The participants were 18 clients living with HIV and AIDS. A data collection instrument included demographic information, 12-Item Personality Inventory (version R), and the Nursing Outcome Scale, Version II. The research questions were "What are the personality traits of clients living with HIV and AIDS?" and "What are the nursing care issues of clients living with HIV and AIDS?" Client responses were transformed into an aggregated data matrix. Twenty-five data matrices of 52 total data points emerged. The majority of client responses fell into three clusters: "Enduring," "Gaining," and "Comply." Clients from the Enduring group expressed a person-centered approach to HIV/AIDS care. The clients in the Gaining group stated that they were inclined to place their needs first. Clients in the Comply group indicated that they were willing to comply with physician's recommendations. The participants in the Enduring group were more likely to accept physical and psychological changes resulting from HIV and AIDS. This group expressed feelings of

hope, acceptance, and personal growth. This group also shared experiences of self-care and coping with a disease that comes with social stigma. The Gaining group and the Comply group shared feelings of fatalism and psychological coping. The Enduring group and the Gaining group experienced more negative affect, while the Comply group reported lower levels of negative affect. Patients in the Gaining and Comply groups expressed few care issues. Patients with the Enduring group were more likely to state that their health care team members are "sick," lack empathy, and are unwilling to

From the File menu: Select: Import From. In the File Type menu, select: GEOXML Format. Click OK. Open the file which contains the basic model that you want to import. Click the Insert tab. In the Reference Files pane, choose: Reference Files. In the Open reference files for: text box, enter: (ModellABSolution\ARC.gxl). In the Save reference files for: box, enter: (ModellABSolution\ARC.gxl). Click Insert. The name of the new layer will be given a name like: Model | ABSolution | ARC-GXL-110ZNX\_2016 To change the units, right click on the layer and select: Properties. Click the UCS icon and choose: Units: Metric. Click OK. To use the keygen with multiple models, create an Autocad workspace for each model. Click the File menu: New | Workspace. In the Name box, type: Main. Click OK. Create one or more new layers. Right-click the new layer and select: Properties. Change the Units to: Centimeters. Click OK. Import the other model into the workspace that was created earlier. Right click the model, select: Insert from Arc GIS. In the Import from box, click: Manual. Click the Import button. The model will open in the workspace which was created earlier. Close the workspace. Select the layer with the GEOXML file. Right click the layer and select: Properties. Click the UCS icon. Choose: Units: Metric. Click OK. Use the double-click or right click the layers tab and select: Map View. In the Map View Options window, click the UCS icon. Select: Units: Metric. Click OK. Create an XY Scaling window, and select the XY Scaling task. Change the Units to: Metric. Click OK. Select the XY Scaling window. In the XY Scaling Options window, click the Check box next to: Edit the data in the original layer. Click the Line Marker button.
